

Homework #06: Multivariate distribution

Isaac Ayala Lozano

Problem 1. Plot the Probability Density Function of a Multivariate Normal Distribution. Consider x and y as the random variables, $\mu_x = 0, \sigma_x^2 = 1$ and $\mu_y = 1, \sigma_y^2 = 2$.

From [1], the Bivariate Normal Distribution ¹ is defined as

$$P(x_1, x_2) = \frac{1}{2\pi\sigma_1\sigma_2\sqrt{1-\rho^2}} \exp\left[-\frac{z}{2(1-\rho^2)}\right] \quad (1)$$

where

$$z \equiv \frac{(x_1 - \mu_1)^2}{\sigma_1^2} - \frac{2\rho(x_1 - \mu_1)(x_2 - \mu_2)}{\sigma_1\sigma_2} + \frac{(x_2 - \mu_2)^2}{\sigma_2^2} \quad (2)$$

$$\rho \equiv \text{cor}(x_1, x_2) = \frac{V_{12}}{\sigma_1\sigma_2} = \frac{\sigma_{11}\sigma_{21} + \sigma_{12}\sigma_{22}}{\sigma_1\sigma_2} \quad (3)$$

Given that $\sigma_{ij} = 0, i \neq j$, then $\rho = 0$ and (1) can be rewritten as

$$P(x_1, x_2) = \frac{1}{2\pi\sigma_1\sigma_2} \exp\left[-\frac{z}{2}\right] \quad (4)$$

In a similar fashion, 2 can be rewritten as

$$z = \frac{(x_1 - \mu_1)^2}{\sigma_1^2} + \frac{(x_2 - \mu_2)^2}{\sigma_2^2} \quad (5)$$

Figure 1 presents the PDF for the given values, employing the built-in function *mvnpdf* and an implementation of the equations developed previously.

¹a multivariate distribution of two variables is known as a bivariate distribution

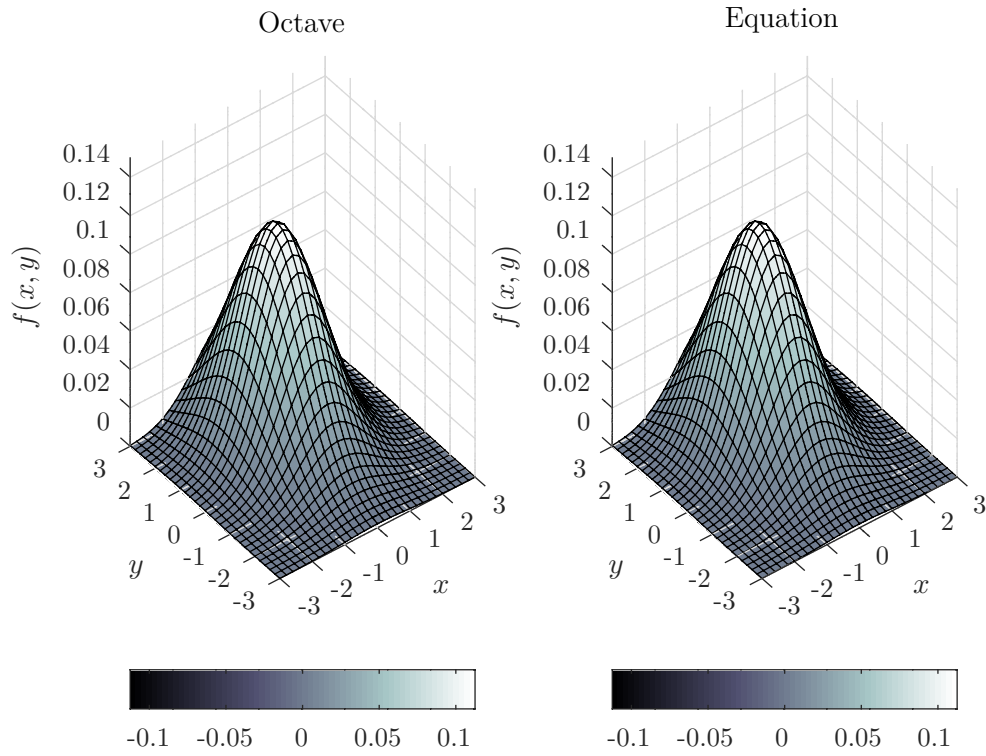

Figure 1: Multivariate Normal Distribution.

Problem 2 Plot the distributions F_X and F_Y of the function in problem 1.

Given that x and y are independent random variables with a normal distribution, both F_X and F_Y are obtained evaluating the normal pdf with their respective values. Figure 2 shows the plots for both of them.

Figure 2: Distributions F_X and F_Y .

Problem 3 What would the plot of Multivariate Normal Distribution of 3 variables look like?

A 3D plot would be insufficient to visualize the distribution, given that it would be in 4D. An approximation in 3D would be slices of the volume with a colormap on its surface to express the values of $P(x, y, z)$ at every coordinate, as shown in figure 3.

Cross section view of $P(x, y, z)$

Figure 3: Slice visualization of $P(x, y, z)$ at $x, y, z = 0$.
